Introduction

What is a cultural resource survey?

The Georgia Historic Resources Survey is an ongoing, statewide survey of buildings, sites, structures, and objects of historical, architectural, and cultural significance. The Georgia Survey is one of the programs administered by the Historic Preservation Division of the Department of Natural Resources (HPD).

Completed surveys can be used to identify individual buildings and districts for possible listing in the Georgia Register of Historic Places; assist the preservation efforts of Georgia's Certified Local Governments; support local designations of buildings and districts; expedite environmental review by governmental agencies;

aid preservation and land-use planning; and promote research of the state's history and architecture. Through the public's participation, encouraged by the HPD, surveys can increase awareness of a community's historic resources.

A goal of historic resource survey is to collect a minimum level of information needed statewide for preservation activities. This basic, standard survey does not gather all the kinds of information needed in local preservation planning, environmental review, National Register nominations, or historical research, but serves as a foundation for these preservation activities.

Figure 1. Project Survey Area of Pierce County

Project Description

The Findit! Program housed at the Center for Community Design and Preservation (CCDP) within the University of Georgia's College of Environment and Design (CED) conducted a Phase I Historic Resource Survey of Pierce County, Georgia in July 2016. Findit! Is a state-wide cultural resource survey program sponsored by the Georgia Transmission Corporation (GTC) in partnership with the Georgia Department of Natural Resources, Historic Preservation Division (GA SHPO). The project area covered the 316 square mile county, identifying resources only in unincorporated portions. Pierce County is located in southeast Georgia and is bordered by Bacon, Appling, and Wayne counties to the north and east, and Brantley and Ware counties to the south and west.

The resource survey was performed by historic graduate students in the Historic Preservation program (MHP) at the CED. The survey consisted of historical and developmental research of the project area, identifying previous surveys and listed districts within the county, windshield and pedestrian field work, and data collection and analysis.

The information collected by the field survey was entered into Georgia's Natural, Archaeological, and Historic Resources Geographical Information System, (GNARHGIS), a web-based geographical information system designed to store and display information about Georgia's cultural resources. GNARHGIS is the repository for all of the current statewide historic resources survey data. The survey information was entered under survey ID 2336, "Findit Pierce County," and can be accessed at: <https://www.gnahrgis.org/gnahrgis/index.do>.

¹ Karen Anderson-Cordova and Leigh Burns. Preservation Primer: A Resource Guide for Georgia, Atlanta: Georgia Department of Natural Resources, Historic Preservation Division, 2011, 5.

Methodology

The survey was conducted according to the procedures outlined in The Georgia Historic Resources Survey Manual. The surveyors used a combination of USGS base maps and GIS data to identify potentially historic parcels and structures.

The survey was conducted according to the procedures outlined in The Georgia Historic Resources Survey Manual. The surveyors used a combination of USGS base maps and GIS data to identify potentially historic parcels and structures. The area was surveyed over the course of several days with systematic coverage of the project area.

Each assigned resource (within the assigned boundaries) was assessed for historic significance, and architectural integrity. A Georgia Historic Resources survey form was completed for buildings having a minimum level of architectural integrity. A structure with architectural integrity is one that generally retains its original location, design, setting, materials, workmanship, feeling and association. Properties with a significant loss of physical integrity, or those lacking historic significance were not surveyed. The physical condition of structures was not a consideration for identification for resources which retained architectural integrity.

All identified resources were approximately 50 years old or older, with the exception of Ranch Houses which were documented with a construction date prior to 1975. All properties surveyed were assigned an identification number then documented with the completion of a Georgia Historic Resource Survey Form, as well as photo documentation and corresponding georeferencing data. The survey form includes information about the use, style, floor plan, materials, context, physical description and an accurate determination of the date of construction and additions. Sources utilized for age determination and architectural style and type description included Lee and Virginia McAlester's *A Field Guide to American Houses*, the *Georgia Historic Resources Survey Manual*, *Georgia's Living Places* and *A Visual Guide to Architecture* by Francis D. K. Ching. All dates of construction are presented in nine year increments unless explicitly identified by markers or other documentation.

Criteria for Evaluation

National Register for Historic Places

Each resource was evaluated for potential listing in the National Register of Historic Places (NRHP), those resources already listed in the Register have been noted. The criteria for listing are outlined in the National Register Bulletin How to Apply the National Register Criteria for Evaluation published by the U.S Department of Interior, National Park Service. Cultural resources can be defined as eligible for the NRHP if they:

- A. Are associated with events that have had a significant contribution to a broad pattern of history; or
- B. Are associated with the lives of persons significant in the past;
- C. Embody distinctive characteristics of a type, period, or method of construction, or represent the work of a master, possess high artistic values, or represent a significant and distinguished entity whose components may lack distinction; or
- D. Have yielded or may be likely to yield, information important to history or prehistory.¹

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the last 50 years are not considered for the National Register. However, properties will qualify if they are integral parts of districts that do meet the criteria or they fall within the following categories:

- a. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- b. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- c. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or
- d. A cemetery which derives its primary significance from graves or persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- e. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f. A property achieving significance within the last 50 years if it is of exceptional importance.

For a property to qualify for the National Register it must meet one of the National Register Criteria for Evaluation by:

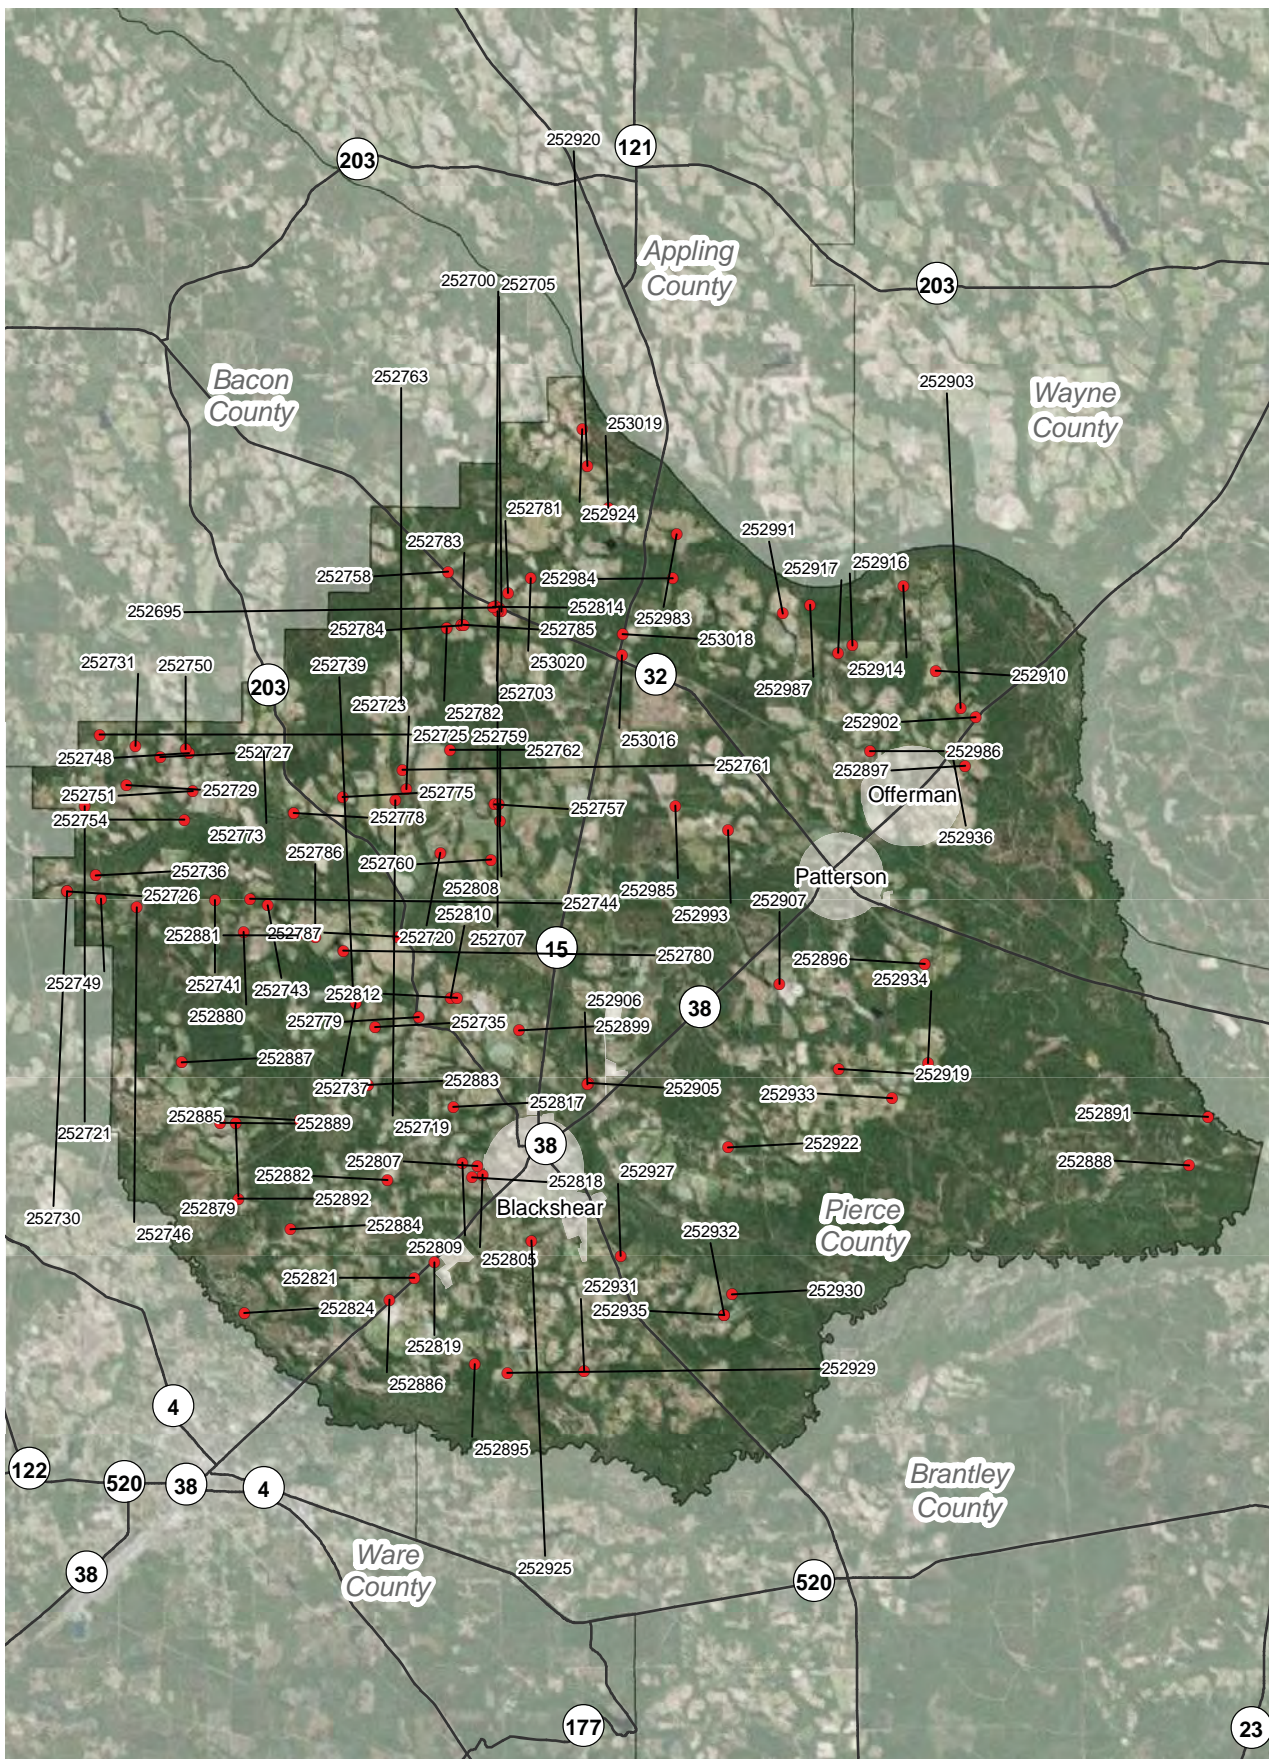

- Being associated with an important historical context and
- Retaining historic integrity of those features to convey its significance.

To determine whether a property or site retains integrity, it needs to be evaluated for the aspects of its location, design, setting, workmanship, materials, feeling, and association to convey its historic significance.²

¹The Criteria for Evaluation are found in the Code of Federal Regulations, Title 36, Part 60, reprinted in U.S. Department of Interior, National Park Service, National Register Bulletin: How to Apply the National Register Criteria for Evaluation, Washington, D.C., 1997, p. 2-3.

²A complete list of areas of significance can be accessed at http://www.nps.gov/nr/publications/bulletins/nrb15/nrb15_5.htm

Figure 2. Identified Historic Resources in Pierce County

Survey Results

A total of 111 historic resources that meet and maintain a minimum level of age, architectural integrity, and historic significance were identified in unincorporated Pierce County. These resources are primarily buildings, with 90 resources remaining county wide. Pierce County has a wide array of extant building types; the Front Gable Bungalow is the most common with 19 identified, followed by the Ranch House of which 13 still exist. The remaining house types had a large variation in type and number and include : Cross Gable Bungalow (5), Hipped Bungalow (1), Side Gable Bungalow (2) Central Hallway Cottage (12), Double Pen (1), Extended Hall-parlor (2), Gabled ell Cottage (3), Georgian Cottage (4), Hall-parlor (3), I-house (2), Plantation Plain (1), Single Pen (2), and unknown (7).

The survey identified architectural styles that were popular in the late 19th and early 20th centuries. Elements of the Craftsman style were noted on 11 extant resources (9.9%), which is indicative of 1920s construction and taste. Elements of the Folk Victorian style was evident on 1 resources, which was fashionable at the turn of the 20th century.

A total of 79 (71.2%) documented structures exhibited no architectural style. A building with no architectural style may be historic, but does not have any characteristics or elements of high style, or classical architecture. Buildings in unincorporated areas usually do not embody high styles, and this figure is representative of vernacular architecture across the state. The variance in building type and architectural styles exhibited in unincorporated Pierce County is typical for historically agrarian Georgia communities.

Table 1: All Identified Resources

Name	Resource ID	Latitude	Longitude	National register eligibility	Description
1	252695	31.46360849	-82.25712927	May meet	Mershon School

No Academic Style	79	71.2%

Integrity

The integrity of documented resources in unincorporated Pierce County was mainly fair to good. The integrity of those not documented, was often affected by non-historic alterations, which compromise the resource's design, materials, and/or historic workmanship. These changes include additions to the building and material replacement including but not limited to: exterior cladding, porch alterations, window or door replacement, etc.

30 of the 111 (27%) identified resources are currently vacant. Many resources documented as 'vacant' maintain excellent integrity; these resources have few, if any alterations to their historic fabric. Vacant properties are considered highly endangered because they are more susceptible to fire and vandalism. Additionally, repairs and weatherproofing are not carried out in a timely manner, thus leaving the structures to decay. The condition of many of these resources is poor, but with minimal intervention, many of them can be restored.

Of the resources with minimal alterations, 12 appear to

meet the criteria for eligibility for the National Register of Historic Places.

57 resource 'may meet' the National Register criteria; these resources have good to excellent architectural integrity, but warrant further research as to their accurate age and historic significance.

42 documented resources do not appear to meet the National Register standards. These resources may maintain historic significance, but do not meet the age criteria (as is the case with many cemeteries), or have undergone extensive alterations which hinder the resource's architectural integrity. These alterations often affect the design, materials, or workmanship of the particular resource, which invariably destroy the historic feeling and significance.

Conclusion

Pierce County has a wide array of extant house types for a formerly agrarian area. 2016 was the first time unincorporated Pierce County was documented; the existing building stock serves as a good sampling of what may have historically been in this area.

A number of mid-century residential and religious structures were documented which may gain historic significance in their own right in the near future. Many mid-century residential resources maintain good integrity with few alterations; religious structures from the same period however, have undergone extensive alterations such as large additions or material replacements. Not documented in this study, but anecdotally noted, were a number of structures dating to the late 1970s and 1980s. If the architectural integrity of these potential resources remain intact, they may warrant a historic inventory in the coming decades.

The disparate location of historic resources does not lend to a contiguous district in the unincorporated portions of the county; however, a multiple property listing or a cultural landscape inventory within an agricultural context may provide protection for these resources on a county level.

Residential Building Types in Georgia

Central Hallway

Single story: One room deep by two wide with central hallway

I-House

Multi-story: One room deep by two wide with central hallway

Gabled Wing Cottage

Single story: Asymmetrical massing with central hallway

Gabled Wing House

Multi-story: Asymmetrical massing with central hallway

Queen Anne Cottage

Single story: Asymmetrical massing with no central hallway

Queen Anne House

Multi-story: Asymmetrical massing with no central hallway

New South Cottage

Single story : Asymmetrical massing with central hallway

Bungalow (Front Gabled)

Single story: Irregular floor plans; one of four subtypes identified by a front gable roof shape

Bungalow (Cross Gabled)

Single story : Irregular floor plans; one of four subtypes identified by a cross gable roof shape

Bungalow (Hipped)

Single story: Irregular floor plans; one of four subtypes identified by a hipped roof shape

Bungalow (Side Gabled)

Single story: Irregular floor plans; one of four subtypes identified by a side gable roof shape

Georgian Cottage

Single story: Two rooms deep by two rooms wide with central hallway

Georgian House

Multi-story: Two rooms deep by two rooms wide with central hallway

Side-Gabled Cottage

Single story: Tightly massed rooms with side projecting gables

English Cottage

Single story: Irregular room placement with pronounced gable entry and chimney

Side Hallway

Multi-story: Two rooms deep by one wide with side hallway

Ranch House

Single story: Multiple rooms wide by two rooms deep; few hallways with interior zoning

Architectural Styles in Georgia: An Overview

The architecture of a house, its overall form and ornamentation, is classified as a style. Style is the decoration or ornamentation that has been put on a house in a systematic pattern or arrangement. Style has long been an important tool for describing, analyzing, and evaluating historic buildings; a style often reflects the needs and tastes of a particular time and a place in which it appears. Styles used during a particular time and in a particular location may contribute to an understanding of the culture of that period.

Folk Victorian 1870-1920

Folk Victorian houses were built across Georgia in very large numbers. They were simple house forms, or house types, with Victorian-era decorative detailing such as jigsaw woodworks including brackets, spindlework and gingerbread trim. This detailing generally was taken from the elaborate styles, such as Queen Anne or Italianate, that were popular during the mid to late 19th century. Features were borrowed and added onto such places as porches and roof gables. This provided some hint of stylistic detailing on what was otherwise an unadorned traditional house form. This style is actually more a way of decorating a house than a precise stylistic category; however, the Folk Victorian house is so widespread that it demands a name.

Colonial Revival 1890-1955

Most Colonial Revival houses are symmetrical. A central entranceway is elaborated with a pediment supported by pilasters or columns. The use of broken pediments, fanlights and sidelights is common. Classical cornices with dentils or modillions are usually present. These features tend to be larger than original colonial details. The roof may be hipped or side-gabled with dormers. Windows have double-hung sashes, usually with six-over-six or nine-over-nine panes and may be paired. Walls are of masonry, masonry-veneer or wood.

English Vernacular Revival 1900-1940

Characteristics of English Vernacular Revival houses are a steeply pitched gabled roof with dominant front-facing gable and decorative half-timbering in the gables. Almost all have masonry walls. Most are masonry-veneered, a recently developed technique for applying a thin layer of masonry to a wall. Some houses have patterned brickwork, while others may be completely stuccoed. Often a variety of materials are used, such as brick walls with stone trim, wood half-timbering, and stuccoed gables. Massive masonry chimneys with decorative tops are common. Windows are generally tall and narrow, grouped together, multi-paned, and casements rather than double-hung. Some openings, particularly the entrance, may be emphasized by a round arch. Houses of this style are generally asymmetrical.

Craftsman 1910-1930

The Craftsman house uses a wide variety of materials both for its structure and decorative detailing. It has a low-pitched roof that is usually gabled but may also be hipped, giving a generally horizontal effect. The widely overhanging eaves are open with exposed rafters. Large gables have decorative brackets or braces at the eaves and may be covered with half-timbering. Roof dormers are sometimes found. Walls are most often wood but may also be covered with shingles or a masonry veneer of stone or brick. Porches have short square columns set on heavy masonry piers extending to the ground. Windows may have a multi-paned sash over a large one-pane sash. Craftsman houses are most often asymmetrical with a generally open and functional plan.

Gothic Revival 1850-1890

Gothic Revival houses typically have steeply pitched gabled roofs with both front-and side-facing gables. Decoratively sawn bargeboards are commonly found along the eaves. Window and door openings often have either pointed arched tops or heavily molded or pointed hoods. Porches are usually supported by slender posts with sawn woodwork forming flattened arches or brackets. Some houses have vertical board-and-batten siding. This style emphasized picturesqueness, verticality, and varied use of materials.

Greek Revival 1825-1860

The Greek Revival style is characterized by details such as prominent columns, pilasters, and wide plain entablatures that encircle a house. Proportions are large and heavy. A symmetrical, rectangular block has a symmetrical front facade with a central entrance. An elaborate door surround contains a rectangular transom, sidelights and pilasters. A typical expression of the Greek Revival in Georgia is a low-pitched, hipped roof supported by columns to form a full-width porch. Porticoes with triangular pediments are also found. Vernacular interpretations with simplified details, such as square rather than round columns, are common. Double-hung windows generally have six-over-six panes.

Neoclassical Revival 1895-1940

The most common feature of the Neoclassical Revival style is a dominant full-height front portico with classical columns. The portico may be at the entry or may cover the full facade; it may have a triangular pediment or be part of the overall roof. A full-height entry portico is often coupled with a one-story full-facade porch. The facade is more or less symmetrical, and the central entrance, surrounded with pilasters and columns, is elaborated with fanlights, sidelights, and transoms. There is almost always a classical cornice with dentils or modillions. The roof is usually low-pitched and hipped and may have a balustrade. A porte-cochere and side porches supported by columns are common.

Italianate 1840-1885

Italianate houses are generally asymmetrical with an L-shaped or other irregularly shaped plan and gabled roof. Distinguishing features are the widely overhanging eaves with decorative brackets that emphasize the cornice. Typically tall narrow windows with large two-over-two or one-over-one panes are often paired, arched, and topped with elaborate hoods. Bay windows are also common. Italianate style residential architecture faded out during the 1880s; however, many Italianate style commercial blocks were constructed until the 1890s. The flat topped blocks with brackets and decorative window moldings were two or more stories tall and featured large storefront windows. Brackets beneath eaves are the most distinguishing characteristic of the Italianate commercial block.

Mediterranean Revival 1890-1910

A Mediterranean Revival house has smooth stuccoed or masonry walls and is usually asymmetrical. The roof is covered with clay tile, is low-pitched, and may be either hipped or gabled. Houses following the Spanish tradition will have little or no eave overhang, while those following the Italian influence will have widely overhanging eaves with exposed rafters. Recessed and arcaded loggias, or open porches, are common. Windows are generally arched and may be grouped together. Sometimes columns and pilasters are used to elaborate openings.

Queen Anne 1880-1915

A Queen Anne style house is asymmetrical with complex roof and wall shapes. It displays a variety of textures, materials, and detailing. The asymmetrical shape results from a floor plan that is open and flowing. The roof is often steeply pitched and hipped with both front-and side-facing, or cross, gables. Wall surfaces avoid a smooth appearance through the use of projecting bays and materials such as patterned shingles that provide texture. The porch is usually asymmetrical and often wraps around two sides of the house. It is supported with slender turned posts and often decorated with sawn brackets and spindlework friezes. Roof gables may also be decorated with sawn ornamentation or spindlework and covered with patterned shingles. There are often prominent and elaborate brick chimneys with patterned and corbeled brickwork. A round or multi-sided tower may be found at a corner.

Spanish Colonial Revival 1900-1940

A Spanish Colonial Revival house has a clay tile roof that is usually gabled with little eave overhang. Walls are of smooth stucco. Arched openings and arcaded loggias, or open porches, are common. Windows are generally casement and grouped together. The roof may be elaborated with curvilinear gables or parapets from the mission tradition. Exposed roof beams may protrude from the walls to emphasize construction methods.
