Introduction

What is a Cultural Resource Survey?

The Georgia Historic Resources Survey is an ongoing, statewide survey of buildings, sites, structures, and objects of historical, architectural, and cultural significance. The Georgia Survey is one of the programs administered by the Historic Preservation Division of the Department of Natural Resources (HPD).

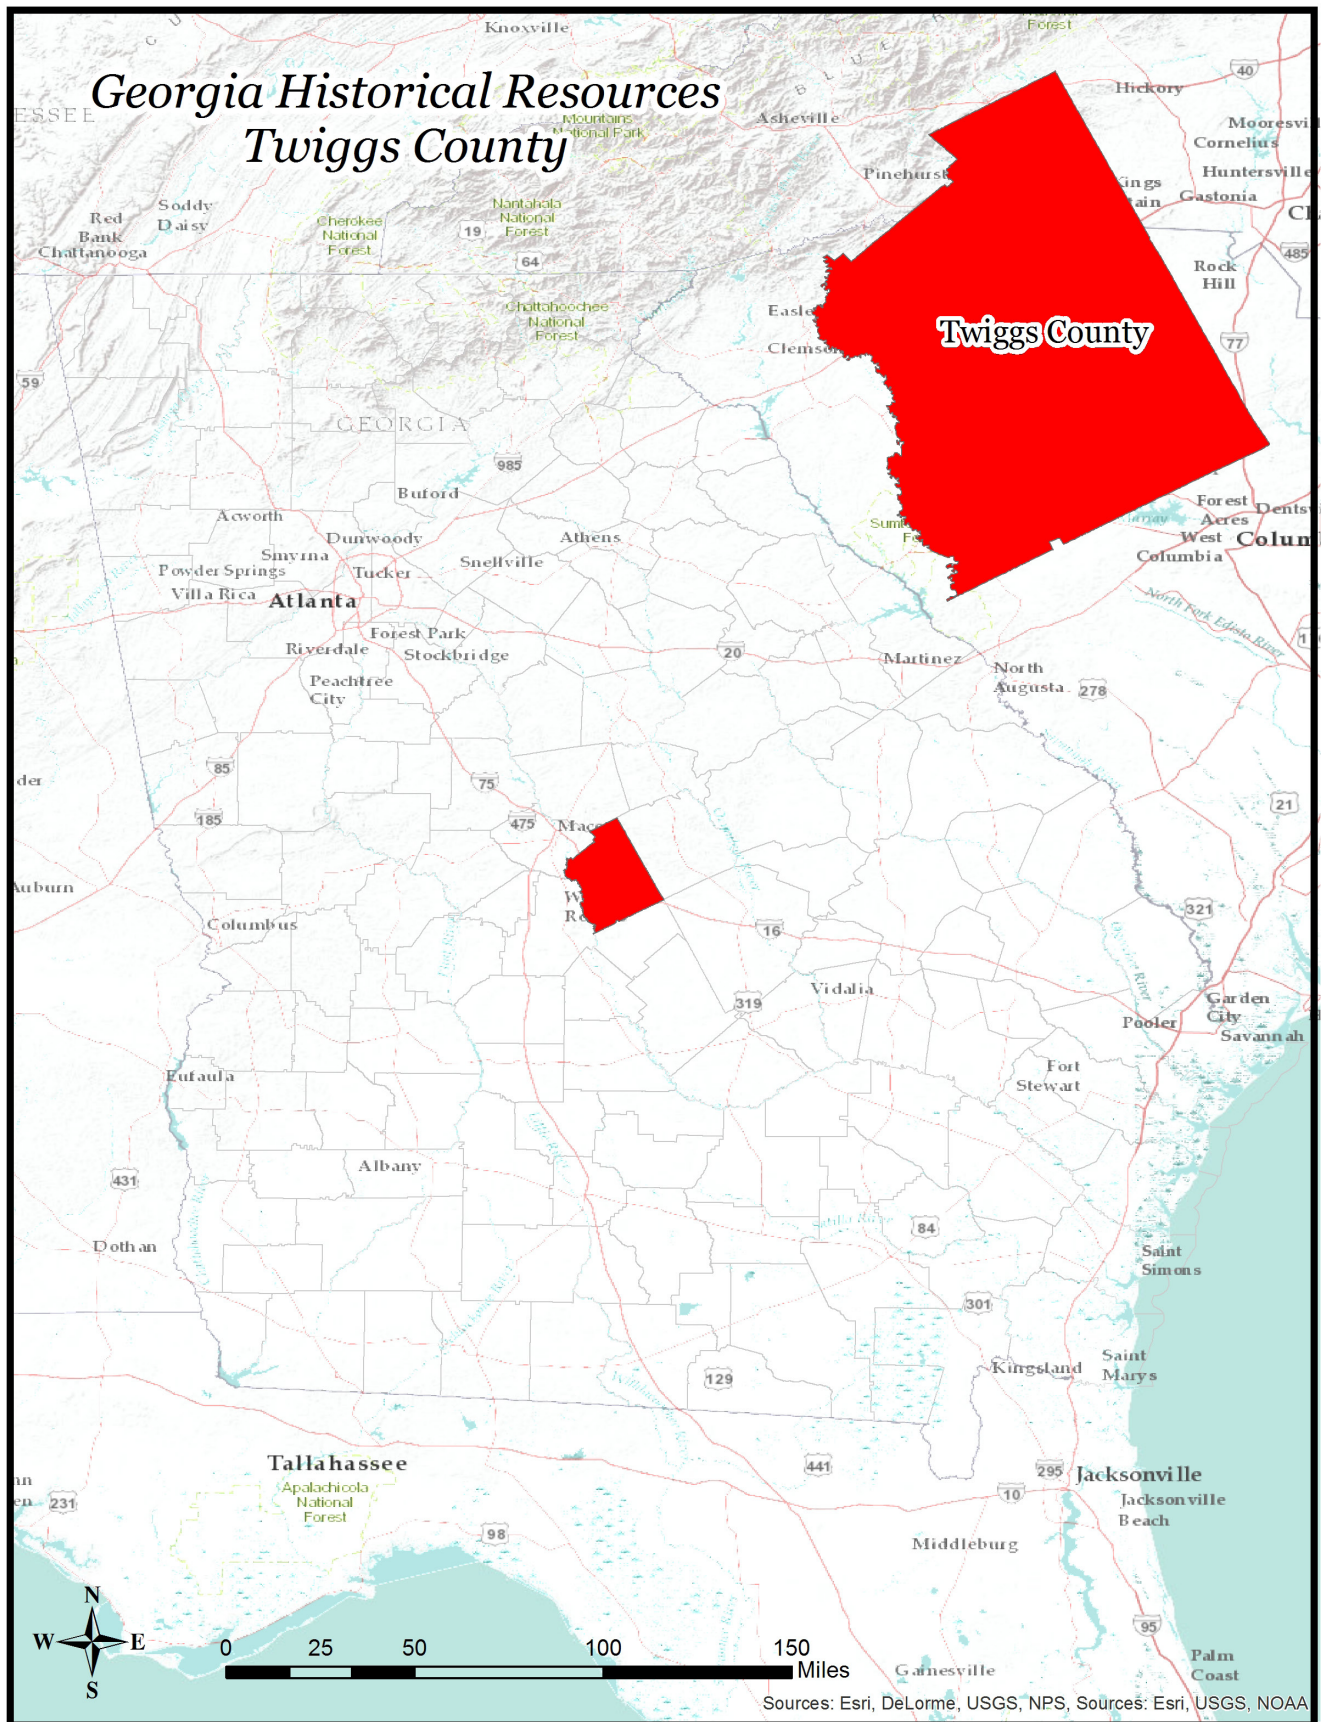

Completed surveys can be used to identify individual buildings and districts for possible listing in the Georgia Register of Historic Places; assist the preservation efforts of Georgia's Certified Local Governments; support local designations of buildings and districts; expedite environmental review by governmental agencies; aid preservation

and land-use planning; and promote research of the state's history and architecture. Through the public's participation, encouraged by the HPD, surveys can increase awareness of a community's historic resources.

A goal of historic resource survey is to collect a minimum level of information needed statewide for preservation activities. This basic, standard survey does not gather all the kinds of information needed in local preservation planning, environmental review, National Register nominations, or historical research, but serves as a foundation for these preservation activities.

Figure 1. Project Survey Area of Twiggs County

Project Description

The Center for Community Design and Preservation (CCDP) located within the University of Georgia's College of Environment and Design (CED) conducted a Phase I Historic Resource Survey of Twiggs County, Georgia in July 2014. The project area covered 363 square miles in unincorporated portion of the county. Twiggs County is located in the heart of Middle Georgia, and is bordered by Wilkinson County on the northeast, Laurens County and Bleckley County on the south, Bibb County on the west, and Jones County to the northwest.

The resource survey was performed by historic graduate students in the Historic Preservation program (MHP) and the Masters of Landscape Architecture program (MLA) at the CED. The survey consisted of historical and developmental research of the project area, windshield and pedestrian field work, and data collection and analysis.

The information collected by the field survey was entered into Georgia's Natural, Archaeological, and Historic Resources Geographical Information System, (GNARHGIS), a web-based geographical information system designed to store and display information about Georgia's cultural resources. GNARHGIS is the repository for all of the current statewide historic resources survey data. The survey information was entered under survey ID 2246, "Findit Twiggs County," and can be accessed at: <https://www.gnahrgis.org/gnahrgis/index.do>.

¹ Karen Anderson-Cordova and Leigh Burns. *Preservation Primer: A Resource Guide for Georgia*, Atlanta: Georgia Department of Natural Resources, Historic Preservation Division, 2011, 5.

Methodology

The survey was conducted according to the procedures outlined in The Georgia Historic Resources Survey Manual. The surveyors used a combination of USGS base maps and GIS data to identify potentially historic parcels and structures.

The area was surveyed over the course of several days with systematic coverage of the project area. Each assigned resource (within the assigned boundaries) was assessed for approximate age, historic significance, and architectural integrity. A “Georgia Historic Resources Survey Form” was completed for buildings having a minimum level of architectural integrity. A structure with architectural integrity is one that generally retains its original location, design, setting, materials, workmanship, feeling and association. Properties with a significant loss of physical integrity, or those lacking historic significance were not surveyed. The physical condition of structures was not a consideration for identification for resources which retained architectural integrity.

All identified resources were approximately 50 years old or older, with the exception of Ranch Houses which were documented with a construction date prior to 1974. All properties surveyed were assigned a field identification number then documented with the completion of a Georgia Historic Resource Survey Form, as well as photo documentation and corresponding georeferencing data. The survey form includes information about the use, style, floor plan, materials, context, physical description and an accurate determination of the date of construction and additions. Sources utilized for age determination and architectural style and type description included Lee and Virginia McAlester’s *A Field Guide to American Houses*, the *Georgia Historic Resources Survey Manual*, *Georgia’s Living Places*, and *A Visual Guide to Architecture* by Francis D. K. Ching. All dates of construction are presented in approximate dates unless explicitly identified by markers or other documentation.

¹ *Georgia’s Living Places: Historic Houses in their Landscaped Settings* (1991), http://georgiashpo.org/sites/uploads/hpd/pdf/NR15arch_20080521100904_optimized.pdf, (accessed August 01, 2012).

Criteria for Evaluation

National Register of Historic Places

Each resource was evaluated for potential listing in the National Register of Historic Places (NRHP); resources already listed in the Register have been noted. The criteria for listing are outlined in the National Register Bulletin *How to Apply the National Register Criteria for Evaluation* published by the U.S. Department of Interior, National Park Service. Cultural resources can be defined as eligible for the NRHP if they:

- A. Are associated with events that have had a significant contribution to a broad pattern of history;
- B. Are associated with the lives of persons significant in the past;
- C. Embody distinctive characteristics of a type, period, or method of construction, or represent the work of a master, possess high artistic values, or represent a significant and distinguished entity whose components may lack distinction; or
- D. Have yielded or may be likely to yield, information important to history or prehistory.¹

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the last 50 years are not considered for the National Register. However, properties will qualify if they are integral parts of districts that do meet the criteria or they fall within the following categories:

- a. A religious property deriving primary significance from architectural or artistic distinction or historical importance;
- b. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event;
- c. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life;
- d. A cemetery which derives its primary significance from graves or persons of transcendent importance, from age, from distinctive design features, or from association with historic events;
- e. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f. A property achieving significance within the last 50 years if it is of exceptional importance.

For a property to qualify for the National Register it must meet one of the National Register Criteria for Evaluation by being associated with an important historical context and retaining historic integrity of those features to convey its significance. To determine whether a property or site retains integrity, it needs to be evaluated for the aspects of its location, design, setting, workmanship, materials, feeling, and association to convey its historic significance.²

¹ The Criteria for Evaluation are found in the *Code of Federal Regulations, Title 36, Part 60*, reprinted in U.S. Department of Interior, National Park Service, *National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, Washington, D.C., 1997, p. 2-3.

² A complete list of areas of significance can be accessed at http://www.nps.gov/nr/publications/bulletins/nrb15/nrb15_5.htm

Developmental History

Twiggs County, located in the geographic center of Georgia, was established by the state legislature in 1809. The county lies along the fall line and contains lands with both Upper Coastal Plain and Lower Piedmont features.¹ Prior to the arrival of Europeans, Mississippian cultures inhabited the lands, including the Creek Indians, who had many settlements and towns along the numerous waterways.² Land was officially deeded to the state of Georgia in 1802 with the signing of the Treaty of Fort Wilkinson. In 1809, 360 square miles of land partitioned from neighboring Wilkerson County to form Twiggs County, named for Revolutionary War General John Twiggs.

Early European settlements in the county were located along preexisting Native American routes and along waterways. Early towns included Rain's Store (later Jeffersonville), Danville, Bullard (later Bullard Depot), and Westlake.³ The county seat was located in centrally located Marion until

relocating to Jeffersonville, six miles to the east, in 1868.⁴

The economy of Twiggs County is dominated by agriculture. In the 19th century, Twiggs County was part of the Southern plantation system and produced upland cotton for export.⁵ Following the war, forestry products and kaolin mining were introduced in the county. These products remained economic staples throughout the 20th century.⁶

By the late 19th century, numerous rail lines connected communities in Twiggs County to outside destinations, increasing economic opportunities. The development of the National Highway system in the 1920s brought Highway 80 through Twiggs County, connected it to Atlanta and Savannah. Construction of Interstate 16 in the 1960s connected Twiggs County to Macon and Savannah. As of 2013, the population of Twiggs County is approximately 8,500 people.⁷

Figure 2. Identified Historic Resources in Twiggs County

Survey Results

A total of 81 historic resources that meet and maintain a minimum level of age, architectural integrity, and historic significance were identified in unincorporated Twiggs County. These resources are primarily sites, cemeteries (54.3%) with non-contributing churches on the parcel.

Twiggs County has a fairly even distribution of extant historic residential house types. These types include Central Hallway (13.5%), Georgian House (10.8%), Saddlebag (10.8%), and the Saltbox (10.8%). This distribution is expected based on the year of construction of identified resources, and the developmental history of the county.

The construction date of all resources ranged from the late 1810s to the early 1960s. The period with the most extant resources is circa 1900 (19.8%), followed by circa 1910 (14.8%). The majority of these structures are vernacular expressions of residential dwellings, with the overwhelming majority (63.9%) exhibiting no academic architectural style. The variance in building type and architectural styles exhibited in unincorporated Twiggs County is typical for heavily agrarian Georgia communities.

Integrity

The majority of the resources in unincorporated Bleckley County exhibited a fair to good level of architectural integrity. The integrity of these resources was most often affected by non-historic alterations, which compromise the resource's design, materials, and/or historic workmanship. These changes include additions to the building and material replacement including but not limited to: exterior cladding, porch alterations, window or door replacement, etc.

14 of the 127 (11%) structures are currently vacant. Many resources documented as 'vacant' maintain excellent integrity; these resources have few, if any alterations to their historic fabric. Vacant

properties are considered highly endangered because they are more susceptible to fire and vandalism. Additionally, repairs and weatherproofing are not carried out in a timely manner, thus leaving the structures to decay. The condition of many of these resources is poor, but with minimal intervention, many of them can be restored.

Of the resources with minimal overall alterations, 31 appear to meet the criteria for eligibility for the National Register of Historic Places. 48 resource 'may meet' the National Register criteria; these resources have good to excellent architectural integrity, but warrant further research as to their accurate age and historic significance.

c. 1890 Single-family dwellings which may meet the criteria for the National Register of Historic Places.

Conclusion

Twiggs County has a fair representation of extant historic resources given its agricultural heritage.

The disparate location of these resources, paired with the overall integrity of these structures do not indicate any potential National Historic Landmarks or historic districts. These resources are typical of unincorporated Georgia, with the bulk of residential structures dating to the turn-of-the-twentieth-century, when Twiggs County saw a surge in population and agricultural production. These structures are representative examples of southeastern residential architecture.

A number of mid-century residential and religious structures were documented which may gain historic significance in their own right in the near future.

Many mid-century residential resources maintain good integrity with few alterations; religious structures from the same period however, have undergone extensive alterations such as large additions or material replacements. Not documented in this study, but anecdotally noted, were a number of structures dating to the late 1970s and 1980s. If the architectural integrity of these potential resources remain intact, they may warrant a historic inventory in the coming decades.

Appendix A:

Architectural Styles in Georgia

The architecture of a house, its overall form and ornamentation, is classified as a style. Style is the decoration or ornamentation that has been put on a house in a systematic pattern or arrangement. Style has long been an important tool for describing, analyzing, and evaluating historic buildings; a style often reflects the needs and tastes of a particular time and a place in which it appears. Styles used during a particular time and in a particular location may contribute to an understanding of the culture of that period.

Adapted from Georgia's Living Places: Historic Houses in the Landscaped Settings, (1991), http://georgiashpo.org/sites/uploads/hpd/pdf/NR15arch_20080521100904_optimized.pdf.

Folk Victorian 1870-1920

Folk Victorian houses were built across Georgia in very large numbers. They were simple house forms, or house types, with Victorian-era decorative detailing such as jigsaw woodworks including brackets, spindlework and gingerbread trim. This detailing generally was taken from the elaborate styles, such as Queen Anne or Italianate, that were popular during the mid to late 19th century. Features were borrowed and added onto such places as porches and roof gables. This provided some hint of stylistic detailing on what was otherwise an unadorned traditional house form. This style is actually more a way of decorating a house than a precise stylistic category; however, the Folk Victorian house is so widespread that it demands a name.

Colonial Revival 1890-1955

Most Colonial Revival houses are symmetrical. A central entranceway is elaborated with a pediment supported by pilasters or columns. The use of broken pediments, fanlights and sidelights is common. Classical cornices with dentils or modillions are usually present. These features tend to be larger than original colonial details. The roof may be hipped or side-gabled with dormers. Windows have double-hung sashes, usually with six-over-six or nine-over-nine panes and may be paired. Walls are of masonry, masonry-veneer or wood.

English Vernacular Revival 1900-1940

Characteristics of English Vernacular Revival houses are a steeply pitched gabled roof with dominant front-facing gable and decorative half-timbering in the gables. Almost all have masonry walls. Most are masonry-veneered, a recently developed technique for applying a thin layer of masonry to a wall. Some houses have patterned brickwork, while others may be completely stuccoed. Often a variety of materials are used, such as brick walls with stone trim, wood half-timbering, and stuccoed gables. Massive masonry chimneys with decorative tops are common. Windows are generally tall and narrow, grouped together, multi-paned, and casements rather than double-hung. Some openings, particularly the entrance, may be emphasized by a round arch. Houses of this style are generally asymmetrical.

Craftsman 1910-1930

The Craftsman house uses a wide variety of materials both for its structure and decorative detailing. It has a low-pitched roof that is usually gabled but may also be hipped, giving a generally horizontal effect. The widely overhanging eaves are open with exposed rafters. Large gables have decorative brackets or braces at the eaves and may be covered with half-timbering. Roof dormers are sometimes found. Walls are most often wood but may also be covered with shingles or a masonry veneer of stone or brick. Porches have short square columns set on heavy masonry piers extending to the ground. Windows may have a multi-paned sash over a large one-pane sash. Craftsman houses are most often asymmetrical with a generally open and functional plan.

Gothic Revival 1850-1890

Gothic Revival houses typically have steeply pitched gabled roofs with both front-and side-facing gables. Decoratively sawn bargeboards are commonly found along the eaves. Window and door openings often have either pointed arched tops or heavily molded or pointed hoods. Porches are usually supported by slender posts with sawn woodwork forming flattened arches or brackets. Some houses have vertical board-and batten siding. This style emphasized picturesqueness, verticality, and varied use of materials.

Greek Revival 1825-1860

The Greek Revival style is characterized by details such as prominent columns, pilasters, and wide plain entablatures that encircle a house. Proportions are large and heavy. A symmetrical, rectangular block has a symmetrical front facade with a central entrance. An elaborate door surround contains a rectangular transom, sidelights and pilasters. A typical expression of the Greek Revival in Georgia is a low-pitched, hipped roof supported by columns to form a full-width porch. Porticoes with triangular pediments are also found. Vernacular interpretations with simplified details, such as square rather than round columns, are common. Double-hung windows generally have six-over-six panes.

Italianate 1840-1885

Italianate houses are generally asymmetrical with an L-shaped or other irregularly shaped plan and gabled roof. Distinguishing features are the widely overhanging eaves with decorative brackets that emphasize the cornice. Typically tall narrow windows with large two-over-two or one-over-one panes are often paired, arched, and topped with elaborate hoods. Bay windows are also common. Italianate style residential architecture faded out during the 1880s; however, many Italianate

style commercial blocks were constructed until the 1890s. The flat topped blocks with brackets and decorative window moldings were two or more stories tall and featured large storefront windows. Brackets beneath eaves are the most distinguishing characteristic of the Italianate commercial block, and varied use of materials.

Mediterranean Revival 1890-1910

A Mediterranean Revival house has smooth stuccoed or masonry walls and is usually asymmetrical. The roof is covered with clay tile, is low-pitched, and may be either hipped or gabled. Houses following the Spanish tradition will have little or no eave overhang, while those following the Italian influence will have widely overhanging eaves with exposed rafters. Recessed and arcaded loggias, or open porches, are common. Windows are generally arched and may be grouped together. Sometimes columns and pilasters are used to elaborate openings.

Neoclassical Revival 1895-1940

The most common feature of the Neoclassical Revival style is a dominant full-height front portico with classical columns. The portico may be at the entry or may cover the full facade; it may have a triangular pediment or be part of the overall roof. A full-height entry portico is often coupled with a one-story full-facade porch. The facade is more or less symmetrical, and the central entrance, surrounded with pilasters and columns, is elaborated with fanlights, sidelights, and transoms. There is almost always a classical cornice with dentils or modillions. The roof is usually low-pitched and hipped and may have a balustrade. A porte-cochere and side porches supported by columns are common.

Queen Anne 1880-1915

A Queen Anne style house is asymmetrical with complex roof and wall shapes. It displays a variety of textures, materials, and detailing. The asymmetrical shape results from a floor plan that is open and flowing. The roof is often steeply pitched and hipped with both front-and side-facing, or cross, gables. Wall surfaces avoid a smooth appearance through the use of projecting bays and materials such as patterned shingles that provide texture. The porch is usually asymmetrical and often wraps around two sides of the house. It is supported with slender turned posts and often decorated with sawn brackets and spindlework friezes. Roof gables may also be decorated with sawn ornamentation or spindlework and covered with patterned shingles. There are often prominent and elaborate brick chimneys with patterned and corbeled brickwork. A round or multi-sided tower may be found at a corner.

Spanish Colonial Revival 1900-1940

A Spanish Colonial Revival house has a clay tile roof that is usually gabled with little eave overhang. Walls are of smooth stucco. Arched openings and arcaded loggias, or open porches, are common. Windows are generally casement and grouped together. The roof may be elaborated with curvilinear gables or parapets from the mission tradition. Exposed roof beams may protrude from the walls to emphasize construction methods.

Appendix B:

Residential House Types in Georgia

Central Hallway

Single Story

One room deep by two wide with central hallway

I-House

Multi-Story

One room deep by two wide with central hallway

Gabled Wing Cottage

Single Story

Asymmetrical massing with central hallway

Gabled Wing House

Multi-Story

Asymmetrical massing with central hallway

Georgian Cottage

Single Story

Two rooms deep by two rooms wide with central hallway

Georgian House

Multi-Story

Two rooms deep by two rooms wide with central hallway

Side-Gabled Cottage

Single Story

Tightly-massed rooms with side projecting gables

Ranch House

Single Story

Multiple rooms wide by two rooms deep; few hallways with interior zoning

Queen Anne Cottage

Single Story

Asymmetrical massing with no central hallway

Queen Anne House

Multi-Story

Asymmetrical massing with no central hallway

New South Cottage

Single Story

Asymmetrical massing with central hallway

Bungalow (Front Gable)

Single Story

Irregular floor plans; one of four subtypes identified by a front gable

Bungalow (Cross Gabled)

Single Story

Irregular floor plans; one of four subtypes identified by a cross roof shape

Bungalow (Hipped)

Single Story

Irregular floor plans; one of four subtypes identified by a hipped roof shape

Bungalow (Side Gabled)

Single Story

Irregular floor plans; one of four subtypes identified by a side gable roof shape

English Cottage

Single Story

Irregular room placement with pronounced gable entry and chimney

Side Hallway

Multi-Story

Two rooms deep by one wide with side hallway
